PROFESSIONAL SUMMARY

Final-year Computer Science undergraduate (CGPA 7.50/10) with hands-on experience across the full software development lifecycle - design, coding, testing, and deployment. Proficient in Python, Java, JavaScript/TypeScript, and Node.js, with practical exposure to REST API development, cloud-native architecture (AWS), and database systems (SQL, PostgreSQL, MongoDB). Built and shipped multiple end-to-end applications independently and in teams, including backend systems, serverless pipelines, and AI-integrated platforms. Strong analytical problem-solver, quick learner of new technologies, and effective communicator, seeking an entry-level Software/Systems Engineer role to contribute to client-facing hybrid-cloud and AI solutions.

KEY SKILLS

Programming Languages: Java, Python, JavaScript, TypeScript, C/C++ (academic)
Software Development: SDLC, REST API Design, Node.js, Express.js, Flask, React.js, Git/GitHub, Agile/Team Collaboration, Debugging & Testing
Cloud & Databases: AWS (Lambda, Glue, Step Functions, S3), Cloud Architecture (IaaS/PaaS/SaaS), SQL, PostgreSQL, MongoDB, Prisma
Data & AI/ML: Data Structures & Algorithms, Pandas, NumPy, EDA, Machine Learning, LLM APIs (Google Gemini), Prompt Engineering

EDUCATION

Parul University (PIET) - B.Tech, Computer Science Engineering CGPA: 7.50 / 10.0	2023 - 2027
Mother's Public School, Bhubaneswar - 12th, CBSE 62.60 / 100	2023
Shri LG Haria Multipurpose School, Vapi - 10th, CBSE 85.40 / 100	2020

INTERNSHIP

Finlatics - Data Science Intern	Jul 2024 - Sep 2024
- Completed the Finlatics Data Science with Python Experience Program, analyzing a banking dataset of ~80,000 rows across 20 columns using Python, Pandas, and NumPy - Performed end-to-end EDA including data cleaning, statistical analysis, and visualization to uncover behavioral patterns - e.g., analyzed the relationship between customer age groups and loan uptake to surface actionable lending insights - Delivered findings through a structured analysis report and presentation, strengthening skills in data-driven decision-making and technical communication	

PROJECTS

AstralQ - AI-Powered Intelligent Assistant Platform	Solo project, in active development
- Designed and developed an end-to-end full-stack platform across the complete SDLC - requirements, architecture, coding, testing, and deployment - converting business datasets into explainable AI-driven insights - Built and tested 10+ backend REST API endpoints covering authentication (JWT-based login, token refresh, session management), user profile management, and workspace/project architecture - Engineered a pluggable-provider architecture integrating Google Gemini 2.5 Flash as the primary LLM, designed to support additional models (GPT, Claude) without core rework - Built the full stack independently: React + TypeScript + Vite frontend with Tailwind CSS/shadcn UI, Flask backend, and PostgreSQL with SQLAlchemy ORM - Achieved 100% automated test pass rate across implemented backend modules; consolidated a multi-step manual sign-up/login process into a single integrated authentication flow	
CPJOP - Cross-Platform Job Optimization Project	Team of 2, in active development
- Designed and built the backend architecture and AI-driven optimization engine for a platform automating cross-platform data migration decisions across AWS services - Developed a dataset-analysis engine that automatically recommends the optimal AWS processing service (Lambda vs. Glue), reducing manual pipeline-planning effort by an estimated 50-70% versus manual configuration - Implemented a serverless ETL pipeline (S3 ingestion -> Lambda/Glue -> MongoDB job tracking) via AWS Step Functions, validated on prototype datasets of 10,000+ records (CSV/JSON) - Integrated Google Gemini API to generate AI-driven cloud service recommendations and migration templates; owned backend APIs, ingestion connectors, and AWS integration (S3/Lambda/Glue)	

ACHIEVEMENTS

- Odoo Hackathon Finalist
